Middle Front-End Developer

About Us

At International Workplace, our combination of subject-matter expertise and technical innovation, helps organisations to drive performance and individuals to realise their potential. It also makes us a unique place to work; bringing together a start-up culture and 25+ years' experience within the learning sector.

We are family-friendly and have a great team of people working together on our mission to evolve into a digital learning company. As part of our strategic move to focus our products entirely on digital solutions, we have a small but growing development team building an eLearning platform using the latest SaaS technology.

What can we offer you?

- 24 days holiday (increasing to 29 with years of service)
- Celebrate your birthday with the day off
- Additional Leave Purchase Scheme
- Remote or hybrid working options
- Perkbox access to discounted goods
- Employer pension contribution of 4%
- Paid volunteer days
- Learning and development opportunities

The role

As we focus on our growth plans and enhancements to our products, we have an exciting opportunity for a Front-End Developer to join our development team. We are on an exciting journey to transform our business to one where digital learning is central to everything that we do, from Virtual Classroom activity and interactive content to customer-focused solutions. To deliver this we need a talented Front-End Developer who will be responsible for shaping and implementing web interfaces and applications for our SaaS products, within the domain of digital and eLearning platforms.

Main responsibilities

- Collaborating across the business to design and refine software development requirements, focusing on our Front-End customer-facing web products.
- Working closely with the Lead Developer on software architecture of front-end features and ensuring design and functionality, user acceptance works in line with back end architecture and features.
- Collaborating with an external design agency to develop the vision for a new company website.
- Managing the Front-End development works for eLearning technologies, through strategic development and improvements of UX and UI design.
- Overseeing the build, test, and deployment of both new and improvement features.
- Through knowledge share and experience, supporting the growth of the development team.
- Supporting the Sales Manager on client engagement activities with new clients, ensuring IW products are successfully adopted and integrated into the client's systems and practice.
- Collaborating with the content team to develop eLearning content and functionality.
- Assist in maintaining our brand across all our client-facing interfaces.

About you

- Commercially aware and outcomes-focused; you're able to keep projects on plan and identify challenges early in order to manage timelines effectively and deliver on time.
- Ability to work across multiple applications and projects, in a fast paced, outputs-focused environment.
- Be comfortable with client-facing activity and discussing complex technical issues with the team and stakeholders.
- Experience with Agile software development processes and developing SaaS applications.

Summary of Skills

- Strong UI & UX
- HTML5, CSS3
- Bootstrap CSS 4/5 optional
- Tailwind CSS desirable
- More than 2 years of experience with JS frameworks such Vue JS, React, Angular or Alpine.js
- Experience with Flutter is desirable
- Ability to use git
- A good understanding of REST and RPC principles
- Instructional design
- Be conscientious about non-functional requirement (i.e., page loading times)
- Knowledge of linters and following coding standards
